

The World's Most Reliable Source Of Free Heat

A World-Wide Reputation For Reliability

Tractor Dealer

"We absolutely love this unit," says Greg Larimore, owner of Webster County Tractor Company in Marshfield, Missouri. The company has been saving energy costs for more than four years with his Clean Burn 2500 unit. "Our Clean Burn hasn't missed a beat—we get 100 percent free heat."

Agri Business

"We have 17 trucks that haul thousands of cattle each year throughout the western portion of the United States," says Brad Bingham, vice president of Bingham Livestock in Tremonton, Utah. "In maintaining those trucks, we have a great deal of used motor oils to dispose of all the time. The Clean Burn furnace we've had for five years is great. I think every farmer who maintains heavy equipment should have these units."

Auto Dealer

"We recycle almost 10,000 gallons of used-oils each year with our Clean Burn units," says Gordon Moore, vice president of McCormick Motors in Nappanee, Indiana. "The energy savings are significant. But the most important benefit is that we've eliminated our liability for transporting the used-oils to a disposal site and we're doing something positive for the environment."
